I want a program that will allow a user to make an account: DOB, name, username, and password

- 1. Ask the user for their DOB
- 2. Store their DOB
- 3. If they answered the question continue by allowing them to proceed. Else continue by allowing the user to enter their DOB
- 4. Ask the user for their full name.
- 5. Store their full name
- 6. If they answered the question continue by allowing them to proceed. Else continue by allowing the user to enter their full name
- 7. Ask the user to create their username
- 8. If they username is 6 digits/letters or more continue by allowing the user to proceed
- 9. If the username is less than 6 digits/letters continue by displaying "username must be 6 digits or more"
- 10. Continue by asking the user to create a password
- 11. If they password is 8 digits/letters or more continue by displaying "Congrats you've successfully made an account"
- 12. If the password is less than 8 digits/letters continue by displaying "password must be 8 digits or more"
